

### Ultrasonic measurement of water flow

Permanently installed ultrasonic clamp-on system for flow measurement of water

#### Features

- Watertight IP68 transducers housed inside the rugged stainless steel mounting fixtures, providing a highly reliable and long term durable solution for measuring at subsurface buried pipelines or at applications where the measurement point can be flooded
- Precise bidirectional, highly dynamic flow measurement, excellent zero-point stability and high reproducibility of measuring results
- Accurate and reliable flow measurement even at pipes with up to 6 % of solids or gaseous contents by volume (e.g., wastewater applications)
- Simple retrofitting solution for existing water networks without interrupting the supply or the need for costly shaft and pipe works
- Power supply selectable: 230 V AC or 24 V DC or 12 V DC (for remote power supply via e.g., solar panels)
- Transmission of measurement data from the data logger via RS232 serial interface
- Analog output 4 to 20 mA and 2 binary outputs (optorelay) available
- Modbus, BACnet and RS485 as communication protocols available

#### Applications

- Flow measurement at water and wastewater pipelines
